Mass Spectrometry
Consultants and Analysts

Lipid Analysis

M-Scan has extensive experience in the detection and detailed characterisation of oils and fats, including:

- Saponification/methylation/GC-MS analysis of fatty acid methyl esters (FAMES).
- MALDI-TOF MS determination of the molecular weight distribution of intact triglycerides and other lipids.
- Probe EIMS and positive ion FABMS analysis.
- Accurate mass measurement to confirm elemental composition.
- Headspace TD/GC-MS determination of degradation products/taints/odours.
- Determination of glyceride contamination of marine cargoes.
- Pharmacokinetic determination of lipid-based pharmaceuticals.

All M-Scan services are provided on a fully confidential basis and reports are peer reviewed. When required by the client, studies are conducted in accordance with the GLP/GMP Compliance Programmes.
